IMPORTANT INFORMATION FOR API TOKEN MANAGEMENT

What is changing?

As part of activities to improve security, API tokens will be hashed with Release R2.21. As a result of this implementation, you will not be able to see your API token openly under 'My Account Settings'. Tokens will be visible **only once** while creating them.

Figure 2.Web Api Security Token - No Previous Token

What will happen to my existing Token?

You can still use your already existing token. But, please note that you will not be able to see it after deployment R2.21.

If I lose my Token or I don't have any, how can I generate a new one?

You should follow the below steps in order to create a new token:

- Open 'My Account Settings' menu
- Under 'Web Api Security Token' field, click on 'Generate a new token'
 - o If you have already had a token the following dialog box will pop-up:

Figure 3. Confirmation Dialog Box

- o Click on "Generate and overwrite" button.

- A new token will be generated and overwrite the old one if exists.

Figure 4. Generated Token

- Please take a note of this token as it will not be visible once the dialog box is closed.
- If you lose your token again, you will need to follow this procedure from the beginning and generate a new one.

I don't see "Web Api Security Token" field, what should I do?

In order to request the access to the Restful API, please register on the Transparency Platform and send an email to transparency@entsoe.eu with "Restful API access" in the subject line. Indicate the email address you entered during registration in the email body. We will make our best to respond to your request.
